Stereo Vision for Facet Type Cameras May 10 2021 The dissertation mainly studies a novel method of subpixel stereo vision for Electronic cluster eye (eCley), a state-of-the-art artificial superposition compound eye with super resolution. In the whole thesis, The author mainly deduce the mathematical model of stereo vision in eCley theoretically based on its special structure, discuss the optical correction and geometric calibration that are essential to high precision measurement, study the implementation of methods of the subpixel baselines for each pixel pair based on intensity information and gradient information in transitional areas, and eventually implement real-time subpixel distance measurement for objects through these edge features. To verify the various methods adopted, and to analyze the precision of these

methods, experiments are implemented in many practical scenes. This stereo vision method extends the ability of perceiving 3D information in eCley, and makes it applicable to more comprehensive fields such as 3D object position, distance measurement, and 3D reconstruction.

Handbook of Attitudes, Volume 2: Applications Dec 17 2021 Attitudes are evaluations of people, places, things, and ideas. They help us to navigate through a complex world. They provide guidance for decisions about which products to buy, how to travel to work, or where to go on vacation. They color our perceptions of others. Carefully crafted interventions can change attitudes and behavior. Yet attitudes, beliefs, and behavior are often formed and changed in casual social exchanges. The mere perception that other people—say, rich people—favor something may be sufficient to make another person favor it. People's own actions also influence their attitudes, such that they adjust to be more supportive of the actions. People's belief systems even change to align with and support their preferences, which at its extreme is a form of denial for which people lack awareness. These two volumes of The Handbook of Attitudes provide authoritative, critical surveys of theory and research about attitudes, beliefs, persuasion, and behavior from key authors in these areas. This second volume covers applications to measurement, behavior prediction, and interventions in the areas of cancer, HIV, substance use, diet, and exercise, as well as in politics, intergroup relations, aggression, migrations, advertising, accounting, education, and the environment.

Konzentriert arbeiten Jan 26 2020 Ständige Ablenkung ist heute das Hindernis Nummer eins für ein effizienteres Arbeiten. Sei es aufgrund lauter Großraumbüros, vieler paralleler Kommunikationskanäle, dauerhaftem Online-Sein oder der Schwierigkeit zu entscheiden, was davon nun unsere Aufmerksamkeit am meisten benötigt. Sich ganz auf eine Sache konzentrieren zu können wird damit zu einer raren, aber wertvollen und entscheidenden Fähigkeit im Arbeitsalltag. Cal Newport prägte hierfür den Begriff »Deep Work«, der einen Zustand völlig konzentrierter und fokussierter Arbeit beschreibt, und begann die Regeln und Denkweisen zu erforschen, die solch fokussiertes Arbeiten fördern. Mit seiner Deep-Work-Methode verrät Newport, wie man sich systematisch darauf trainiert, zu fokussieren, und wie wir unser Arbeitsleben nach den Regeln der Deep-Work-Methode neu organisieren können. Wer in unserer schnelllebigen und sprunghaften Zeit nicht untergehen will, für den ist dieses Konzept unerlässlich. Kurz gesagt: Die Entscheidung für Deep Work ist eine der besten, die man in einer Welt voller Ablenkungen treffen kann.

Continuum Scale Simulation of Engineering Materials Mar 08 2021 This book fills a gap by presenting our current knowledge and understanding of continuum-based concepts behind computational methods used for microstructure and process simulation of engineering materials above the atomic scale. The volume provides an excellent overview on the different methods, comparing the different methods in terms of their respective particular weaknesses and advantages. This trains readers to identify appropriate approaches to the new challenges that emerge every day in this exciting domain. Divided into three main parts, the first is a basic overview covering fundamental key methods in the field of continuum scale materials simulation. The second one then goes on to look at applications of these methods to the prediction of microstructures, dealing with explicit simulation examples, while the third part discusses example applications in the field of process simulation. By presenting a spectrum of different computational approaches to materials, the book aims to initiate the development of corresponding virtual laboratories in the industry in which these methods are exploited. As such, it addresses graduates and undergraduates, lecturers, materials scientists and engineers, physicists, biologists, chemists, mathematicians, and mechanical engineers.

Chaucer and the Making of English Poetry, Volume 2 Nov 16 2021 Originally published in 1972. This important work of Chaucerian scholarship deals with two aspects of the poet and his work - his individual achievement and his place in history - and demonstrates that in both these senses Chaucer is a maker of English poetry. The author explores Chaucer ' s narrative art. The book includes an examination of the puzzling question of narrative structure in the Canterbury Tales and of the nature of Chaucerian comedy in these works. The author surveys the major themes of the poems: Fortune and free will, marriage, and the nobleness of man. In the final chapter she treats of the meaning of Chaucer ' s art for his successors. Throughout the work, Miss Kean deals extensively with the sources which Chaucer used for the writing of his poems, in a way which directs light on the more difficult aspects of his art.
