generating plants which connected to the consumer loads as it is well known that energy cannot be created nor be destroyed but can only be converted from one form of energy to another form of energy electrical energy is a form of energy where we transfer this radial and ring main power distribution systems what are they Dec 15 2021 17 06 2014 the drawback of a radial electrical power distribution system can be overcome by introducing a ring main electrical power distribution system in this network topology one ring network of distributors is fed by more than one feeder in this case if one feeder is under fault or maintenance the ring distributor is still energized by other feeders connected to it
