Evidence and the Advocate: A Contextual Approach to Learning Evidence Jun 14 2021

Evidence and the Advocate teaches each rule of evidence using a three pronged approach: (1) a treatise-like explanation of the rule, its purposes, exceptions and foundations; (2) cases, discussion questions and hypothetical problems related to the rule; and (3) an application section in which the students must prepare a courtroom exercise putting the rule into action. This approach forms a teaching template for each rule of evidence. Each application exercise stands alone and has been designed to illuminate the rule being taught. The application exercises range from simple form-of-question drills to full-fledged evidentiary hearings. Some require minimal preparation, and others require significant out-of-class research and preparation. In the exercises, students serve as attorneys, witnesses, judges, and, in the more involved exercises, as a court of appeals. The exercises build on each other. The initial exercises focus on fundamental advocacy skills such as conducting a direct examination or laying the foundation for an exhibit. Later exercises incorporate these foundational skills for more complicated tasks such as writing a motion, impeaching a witness, or conducting a Daubert hearing on the reliability of expert testimony.

Understanding Creative Users of ICTs Apr 24 2022 The disjuncture between the design intent of the developers of ICTs and the needs of the users has often led to surprising use of new technologies, as users have refused to become mere agents of the designers. Individual users have adopted their own uses of ICTs based on the complex webs of relations and meanings in which they function as social actors. Instead of adjusting these webs to new ICTs, they have fit the ICTs into their pre-existing social webs, often resulting in imaginative and creative uses of new technologies, not envisaged by the original designers. The contributions in this volume provide studies of such

integrations of ICTs into the lives of human users, and demonstrate that such uses should not be regarded as 'faulty' or 'mistaken', merely because they 'fail' to meet the expectations of the original designers of the ICTs. Instead, human users should be given precedence over ICTs, and the creative uses of 'universal' technologies by individual users should be emphasised and studied, so as to move towards a better understanding and appreciation of the integration of ICTs into human lives. This book was originally published as special issue of The Information Society.
