[Assessment of Nontimber Forest Products in the United States Under Changing Conditions](#) Jul 12 2021 Nontimber forest products (NTFPs)

are fundamental to the functioning of healthy forests and play vital roles in the cultures and economies of the people of the United States.

However, these plants and fungi used for food, medicine, and other purposes have not been fully incorporated into management, policy, and resource valuation.

This report is a forest-sectorwide assessment of the state of the knowledge regarding NTFPs science and management information for U.S. forests and rangelands (and hereafter referred to as the NTFP assessment).

The NTFP assessment serves as a baseline science synthesis and provides information for managing nontimber forest resources in the United States.

In addition, this NTFP assessment provides information for national-level reporting on natural capital and the ecosystem services NTFPs provide.

The report also provides technical input to the 2017 National Climate Assessment (NCA) under development by the U.S. Global Change Research Program (USGCRP).

[Successful Service Design for Telecommunications](#) May 10 2021

Comprehensive reference to successful service design for the telecommunications industry

Telecommunications companies operate in increasingly competitive environments. The companies that survive and excel are those offering the most compelling range of products and services.

These services are complex since they touch all aspects of business. Service design and implementation skills are therefore the key for staying on top of the competition.

Successful Service Design for Telecommunications provides a comprehensive guide into service design and implementation. The author provides a consistent approach to designing scalable and operable processes that can be used when designing a variety of technologically based services; offering concepts, principles and numerous examples that the readers can easily adapt to their technological environment.

Key features: Defines what telecommunications services are from business, technical and operational perspectives

Explains how telecommunications services can be implemented, including implementation strategies for both new service introductions and enhancements to existing services

The principles and management processes described can be used on all telecommunications services (fixed, mobile, broadband and wireless) and technology (e.g. IT and Internet) based services

Includes references to the current best practices and industry standards and complements the eTom and the OSS/ BSS models proposed by the TeleManagement Forum

Features numerous real-life scenarios and examples to support the discussion on the key concepts of service design

This book will be of interest to managers, service designers, project managers, IT professionals, operation managers and senior executives who work in the telecommunications sector.

University students studying telecommunications, IT and service science courses will also find this text insightful.
