We are Millions Jul 20 2019 Since the 1970s, a brutal transference of resources from the poor to the rich has taken place here in Argentina. This book looks at the politics which led to mass poverty and unemployment, and describes the rich and varied social responses to economic meltdown and political crisis.

Action, Decision-Making and Forms of Life Jan 18 2022 The book is exceptional because it applies the notion of forms of life to the context of human action. It provides answers to the following questions: Why do we act in a specific way? Why do we make particular decisions? Does one's form of life and language games determine our actions and decisions? Wittgenstein proposes a holistic method which enables us to give coherent answers to these questions. To answer the question of the contents of actions and decisions we have to explain how we have institutionalized these actions or decisions. To this aim we shall reveal the frame within which language games are introduced and have come to function as practice and custom. The scheme of order underlying the language games is illustrated. Human actions and decisions follow particular rules. By highlighting the underlying scheme of order we may gain a perspicuous view of these rules. The aim of this book is to show that actions and decisions generate rational choice. This choice is explained by demonstrating the particular functions of the language games involved.

Nonlinear Computational Geometry Jul 12 2021 An original motivation for algebraic geometry was to understand curves and surfaces in three dimensions. Recent theoretical and technological advances in areas such as robotics, computer vision, computer-aided geometric design and molecular biology, together with the increased availability of computational resources, have brought these original questions once more into the forefront of research. One particular challenge is to combine applicable methods from algebraic geometry with proven techniques from piecewise-linear computational geometry (such as Voronoi diagrams and hyperplane arrangements) to develop tools for treating curved objects. These research efforts may be summarized under the term nonlinear computational geometry. This volume grew out of an IMA workshop on Nonlinear Computational Geometry in May/June 2007 (organized by I.Z. Emiris, R. Goldman, F. Sottile, T. Theobald) which gathered leading experts in this emerging field. The research and expository articles in the volume are intended to provide an overview of nonlinear computational geometry. Since the topic involves computational geometry, algebraic geometry, and geometric modeling, the volume has contributions from all of these areas. By addressing a broad range of issues from purely theoretical and algorithmic problems, to implementation and practical applications this volume conveys the spirit of the IMA workshop.
